Foreward

Since the time of Nilamata Purana, Kashmiri Pandits have textual evidence of annual release of the Kashmiri ephemeris (Panchang) on the New Year's Eve known as Navreh. Those community members who live in North America have always been handicapped because of geographical and time zone differences as to when their festivals or tithis begin and end. Thankfully, now, there is a happy solution. Mr Satya Bhushan Kaul Ji has been working on a project to rectify this problem. He has in collaboration with Mr Puneet Jyotshi (who compiles Vijayeshwar Jantri annually from Jammu to serve the needs of Kashmiris where ever they are located India has come up with another edition of the Vijayeshwer Jantri for the year 2022-2023. It is, titled as Vijayeshwer Almanac, USA and Canada Edition.

The format adopted in the ephemeris is of the same type to which Kashmiris are familiar and accustomed to. The Panchang has been customized for the individual zones in the U.S. With this panchang the community can now follow its religious customs, as per the Shastras starting April 1, 2022. It will enable the community to be aligned with each other on both important and auspicious tithis. I thank Satya Bhushan Ji for his perseverance and supreme contribution to the North American Kashmiri Pandit community. Mr Puneet Jyotshi's diligence in computing the data has also to be appreciated and I thank him also for the job.

Rakesh K. Kaul

Introduction

Mr Puneet Jyotshi has already given the parameters of calculating a vedic Tithi of a place. I would add further to that.

The Sun rise timings shown in the almanac are at the time the full disc of the Sun emerges from the horizon and accordingly sun set timings have been given. All the movements of the planets have been calculated according to SURYA SIDDHANTA and incorporated in the ephemeris of the day, with Tithi. Given the orbit of the Earth round the Sun which is elliptical due to inclination of Earth's axis at an angle of 23.5 degrees with the vertical, both Tithis and Seasons get changed as also the Sun rise and Sun set timings. of a place. Because of this a Tithi prevailing In USA or any other place cannot be the same for India. I have noticed a trend being followed in USA that a tithi in India can be followed here on the next date as we are behind their time by nine and a half hours or ten and a half hours. Note, here, the Sun rise and Sun set timings are different to those prevailing in India and as such this approach cannot be adopted. Practically Sun rise time of a date in India will be the previous date and night here and Sun set time of India will be here in the morning by a difference of nine and a half or ten and a half hours on the same day and date. There is a possibility that a tithi here can be observed on the same day as in India which will be because of DevA-Dev status but not on the next day. Generally speaking nearly 75 % of Tithis in a month will come first in USA and then in India. This is because the Earth revolves round the Sun from West to East if observed from above over North Pole. But when you observe this orbit of Earth over South pole it will be from East to West. So, Tithis will come first in those regions of West who are behind Indian Standard time. Similarly, those regions or countries who are ahead of Indian Standard time of India will have tithis later than India.

This almanac incorporates all the details about tithis, festivals, fasting days, Muhurats etc. As there are four time zones followed in both USA and Canada, almanacs for each zone have been computed separately to avoid confusion among

the readers. There are also Muhurat charts with timings for each zone. All in all, these four almanacs based on their sunrise and sunset timings should serve the purpose to its maximum for our community.

I am grateful to Mr Puneet Jyotshi who has made this possible for the community here in USA and Canada and compiled the almanacs in a short period of time and that too in consonance with four zonal timings. Full marks to him for his diligence. The almanacs have not been printed out but put in PDF formats to be transmitted digitally to the community members. so as to reach them well before the ushering of New Vedic Year which commences in USA and Canada on April 1, 2022 that is one day ahead of India. April 1 will be NAVREH (Start of Navratra in U.S.A and CANADA). Recipients of the almanacs can also read my detailed explanation as to how any why tithis appear first in USA and then in India. This is enclosed at the end of the almanac.

Lastly I am thankful to Dr. Sushma Kaul and Mr. Rakesh Kaul Ji of New Jersey who have backed this project and provided financial assistance also. God Bless them...

Preface

Panchang of a day at a place or region is based on calculations of time, latitude, longitude, planetary positions and time zone of a place. It consists of five parts namely Tithi, Vaara, Nakshastra, Yog and Karna. A Tithi is complete when the moon is 12 degrees from the Sun and when Moon completes 12 degrees each time a Tithi is complete. There are thirty Tithis in a lunar month which comprises of two Pakshas known as Shukla Paksh and Krishan Paksh respectively. One should know that the Moon has to complete a Round of 360 degrees to give us thirty Tithis. It is also important to note that Starting time and ending time of a Tithi depends upon the degree of moon from that of the Sun and therefore Tithis can start or end at any time of day. Here the day means from one Sun rise to next Sun rise. In Jyotish one KALA of the moon is called a Tithi in a lunar Calender. Panchang has to be tabulated with sun rise and sun set of a particular place because it helps to determine the planetary position of each day. and their movements like Vakriya, Maargi, Udit, Aasta,, Sankratis of all planets, Amavasya, Poornimas, Solar and Lunar eclipses Vrats, Festivals and Melas. Hence a Tithi in United States of America or Canada or any other country on a particular date cannot be the same in India or vice versa. Any Panchang from Jammu (India) cannot prove helpful in following the exact tithis. Particularly fasts and festivals in United States & Canada. Considering this an imperative necessity I have computed an initial edition in a short span of time, Not an easy job to complete for United States / Canada which have four time zones, day light savings in place. I was exhorted to prepare this by Shri S.B. Kaul. I am thankful to Mr Kaul for the necessary inputs he provided regarding the Zonal timings, day light savings dates. It was his suggestion to compute zone wise Panchangs so as to make it easy to read and understand. I have included all the festivals, important tithis which matter for fasts, festivals, Shraddh Tithis and of course the tithi for Vatuk Pooja coming next year. A separate section has also been enclosed for muhurats which includes, Yagneopavit ceremony. Marriage ceremony, Punn Saath, House warming dates and other muhurats etc. There is also a Pooja section comprising Stotras and Stottrams for offering daily prayers (both concise and elaborate) given by Shri. S. B Kaul. Should any community member need any more assistance, he or she is welcome to contact me via email on vijayeshwer@yahoo.com or whatsApp at +91 96826 13996.

In the end I am once again thankful to Shri S.B.Kaul for editing the final version and Pt. Chand Ji Razdan, Pt. Suneet Jyotshi & all those community members who are behind this project.

Explanation of Tithis & Pradosh Kaal

Topic 1 :

Why Tithis in USA and Canada fall one day earlier than in India according to lunar Calendar (Almanac) when we are behind the IST (India Standard Time)

Answer: To fully understand this let us take the USA time zones as a reference and example. I have chosen the date April 1 as it is the first day of Navratri here in USA and Canada, known as NAVREH to Kashmiri people. The four cities chosen for this are 1. New York in EST Zone 2. Chicago in CST Zone 3. Denver in the MST Zone and Livermore in PST Zone.

Date April 1, 2022 New York 26.24 starting time, ending time on April 2 at 26.28, Chicago starting time 25.24, ending time at 25.28, Denver starting time 24.24, ending time 24.28 and Livermore starting time 23.24 on March 31 and ending time 23.28 on April 1. Now, have a look at both the starting and ending times of tithis in all zones. You will get one hour difference each between EST and CST, CST and MST, MST and PST in starting and ending times of Tithis. Also, three hours difference between New York and Livermore, two hours difference between Chicago and Livermore and one hour difference between Denver and Livermore. So here is the equation you derive from this: The starting and ending times of Tithis is equivalent to the time difference of each place you are comparing, Here Chicago is behind by one hour to New York, Denver is behind by two hours to New York and Livermore in California is behind by three hours to New York. It is manifest and clear that a tithi in Livermore will start and end first compared to New York, Chicago and Denver by the same amount of time it is behind. Similarly a tithi will commence and end first in Denver compared to Chicago and New York by the difference of time in each zone. I have compared all the cities falling in the USA. Same principle holds good for India and the USA.

Now let us take Jammu for India and New York for the USA for comparison and the date is April 1 of the current year. The almanac for Jammu is Amavasya starts there March 31 at 00.23 in the night and ends on April 1 at 11.54 AM and Pradipad starts at the same time. Now compare it with New York. Amavasya ended at 26.24 on the night of 31 March and Pradipad started at the same time. Let us have a look at the ending times of Amavasya in Jammu and New York. As you know New York is currently behind by nine and a half hours to Indian Standard time the difference between the two will be 9.30 hours. Simply subtracting the ending times (26.24-11.54) equals nine and a half hours. Now on April 1, Jammu has Krishan Paksh Amavasya tithi, so Navreh cannot

start there because of dark fortnight and Amavasya which has started before the sun rises. This explains why Navreh will start on April 2 not only in Jammu but all of India. Because of this India will have nine days Navratri and here in the USA and Canada will have ten days Navratri. But the last two days of Navratri will fall on the same dates both here and in India. That is Durga Ashtami will be on April 9 and Ram Navmi will be on April 10. Some of the tithis in a month can also fall on the same date here and in India. This is because of half Tithies prevailing in one of them known as DevADev tithis as well as Treyah Tithis (A tithi which is lost.). But to know that you should have an almanac of both places. As Navratra starts here on April 1, 2022 THAAL BARUN will have to be done on March 31 itself.

Topic 2:

What is Pradosh?

Answer: Pradosh is the time when day and night meet after the sunset in the evening. It comes every day and is a good time for worshipping. Usually Lord Shiva is worshipped in the Pradosh Kaal (time). It is for three hours, one and a half hours before sunset and one and a half hours after sunset. Trayodashi of a month is considered to be more auspicious as this is the Tithi of Lord Shiva. One of the reasons for solemnizing Har Ratri (Herath Pooja) during Pradosh kaal when Trayodashi is not prevailing in the night.

Wishing all the community a happy Navratri, Durga Ashtami and Ram Navmi and best and happy new year (Vedic). May Goddess Durga bless us all.

A Write Up on our Heyrath/Vatuk pooja / Har-Ratri and Shiv Chaturdashi/ Maha Shivratri-

Explaining the difference between the two Paravs Heyrat Pooja also called Vatuk Pooja, Har Ratri/Shivratri is a festival running from first day of Phalgun Krishan Paksh to Amavasya of the same fortnight. It has to be differentiated with the festival of Maha Shivratri which follows our Heyrat. On Chaturdashi, popularly known as Shiv Chaturdashi.

I am forwarding the following excerpts of write up of Late Dr Manmohan Jyotshi, explaining the differences of two Tyohaars. He has also given references to the instructions contained in Bhairav Yaad Granth and also relevant references from other books which our Dharam Chintamanis have written in the past from the times of yore. Specific point involved is the tithi on which our Vatak pooja has to be done. This tithi is Trayodashi and cannot be altered to suit vested interests.

I am also enclosing Facebook links of statement issued jointly by Late Kashi Nath Jyotshi and Late Prem Nath Shastri in 1994-95 Vijayeshwer Jantrie who have jointly endorsed that Trayodashi is the Tithi to be followed for our Vatak Pooja/ Shivratri.

https://m.facebook.com/story.php?story_fbid=10157254604947658&id=684912657

https://m.facebook.com/story.php?story_fbid=714302025288986&id=100001275868252

Late Dr Manmohan Jyotshi has gone further ahead explaining in detail in a video which is on the Facebook Reference <https://fb.watch/c0jKXtCikx/>

Write Up Of Late Dr Manmohan Jyotshi.

1. Why Tithi Trayodashi is important to celebrate Heyrath?

Answer:- According to Bhairav Yaag Granth Trayodashi is the factor to solemnize the day of Heyrath. This Trayodashi should be present or prevail at Ardh Ratri (midnight). That is precisely the reason that our Vatak Pooja/Har Ratri is sometimes solemnized on Dvadashi and also on Trayodashi depending upon the status of Tithis.

2. Are Heyrath and Maha-Shivratri same festivals?

Answer:- Our Heyrath is Har-ratri celebrated on Trayodashi and Maha Shivratri, popularly known as Shiv Chaturdashi So actual tithi is Chaturdashi. Further Heyrath and Maha Shivratri cannot be solemnised or celebrated on the same date and day. I say with authority that whatever festival dates are written or mentioned in Vijayeshwer Jantrie are according to laid down procedures mentioned in the religious documents and practices adopted by Our ancestors . We have to follow the laid down ethics for the same.

Naverah Poshte to All and Best wishes for the Vedic New Year starting 1, April 2022.

Puneet Jyotshi
